
Dr Sanjay K Prajapati

Dr. Sanjay K Prajapati has been involved in various scientific activities like analysing and interpreting seismological, GPS and InSAR data, which includes studying earthquakes, crustal deformation and geodynamics evaluation. He also involved in 24 x 7 real time earthquake monitoring in the country, and research work in different aspects of Tectonic Geodesy and seismology. Dr. Prajapati has published valuable scientific research papers in National and International Journals.

Dr. Prajapati, has made significant contribution in established several permanent GPS stations in seismically active and stable continental region of Indian subcontinent, to map the strain rate and measure the present-day deformation rate. He also actively involved in site selection and establishment of Seismic network in various part of North India as a part of optimum seismic monitoring network of India.

Dr. Sanjay K Prajapati is awarded the Certificate of Merit for his outstanding contributions in the field of Geosciences and Technology.
